

Hyeokgi Kim

ryan0905@snu.ac.kr | github.com/grenademeister | linkedin.com/in/hyeokgi-kim

Summary

Undergraduate student majoring in Electrical and Computer Engineering with a strong interest in deep learning and medical imaging. Experienced in developing AI agents and neural network models using Python and PyTorch with hands-on projects such as MRI foundation models and transformer-based models.

Education

Seoul National University Electrical & Computer Engineering GPA: 4.17 / 4.3	2024 – Present
Gyeonggi Science High School for the Gifted GPA: 4.27 / 4.3	Graduated 2023

Publication

The PokeAgent Challenge: Competitive and Long-Context Learning at Scale - Seth Karten, Jake Grigsby, ... , Hyeokgi Kim, et al. - arXiv preprint, NeurIPS 2025 Competition Track	2026
--	------

Research & Topics

Counterfactual lesion synthesis using MRI foundation model - Research Project at SNU LIST	2026
Longitudinal brain MRI reconstruction with Diffusion/Flow model - Research Project at SNU LIST	2025
Analytic model of horizontal Brazil nut effect by void filling - Graduation research in physics	2023

Awards & Professional Experience

Research Intern, LIST, Seoul National University - Undergraduate research intern advised by Jongho Lee	May 2025 – Feb 2026
KSAF National Scholarship for Outstanding STEM Students	Since 2024
PokeAgent Challenge at NeurIPS 2025 - Track 2 – Speedrunning, Long-horizon gameplay. Judge's Choice Award	Nov 2025
POSTECH OIBC Challenge 2025 - Solar radiance prediction track. Third prize	Nov 2025
Student Member, Deepest (research group)	2025 – 2026

Technical Skills

- **Programming Languages:** Python, C++, JavaScript, Rust
- **AI/ML Frameworks:** PyTorch, HuggingFace Transformers/Diffusers, OpenAI Gym
